

Appointment for First Visiting Patients

外来初診患者の「完全予約制」について

It is our policy that we require all first time visiting patients to be referred by their family doctor. This ensures the advanced appointment is scheduled with a doctor in the right department, and we believe it will also minimize patients wait time. If you visit our hospital without an advanced appointment, you might not get to see a doctor, even if you had a referral letter in hand, unless you require urgent medical attention. You could however make an appointment for the future.

Normally, the appointments should be made by the family doctors in advance. However if you have a referral letter without an appointment, please contact our “New Case Appointment” desk to make an appointment in advance.

We provide you the same day consultation on the cases as below;

- ① In an urgent medical care case
Referring patients who require urgent medical care, the family doctor should contact directly to our doctor at the corresponded department.
- ② When there is an open appointment available for the day
However, there is usually no open appointments in the departments listed below. Please be sure to make an appointment with your doctor for these departments.

Respiratory medicine, Diabetes Endocrinology, Neurology,
Gastroenterology, Nephrology, Ophthalmology,
Breast surgery
